# Hospital Ratings Heart Surgery

The data come from the Society of Thoracic Surgeons for hospitals that have agreed to share their data with us.

**BYPASS SURGERY RATINGS** Reflects a hospital’s performance in isolated coronary artery bypass graft surgery, including the open-heart approach and less invasive versions. Overall score is a composite of four measures: survival (percentage of patients who leave the hospital and survive at least 30 days after surgery), complications (percentage of patients who avoid the most serious complications, including needing a second operation, developing a deep chest infection, suffering a stroke or kidney failure, and requiring prolonged ventilation), best surgical technique (percentage of patients who receive at least one graft from an internal mammary artery, located under the breastbone, which improves survival), and right drugs (percentage of patients who receive beta-blockers before and after surgery to control blood pressure and heart rhythm, aspirin to prevent blood clots, and a drug after surgery to lower LDL (bad) cholesterol).

**VALVE REPLACEMENT RATINGS** Reflects a hospital’s performance in surgical aortic valve replacement. Does not include data for transcatheter aortic valve replacement, though the STS has started to collect it. Overall score is a composite of two measures: survival (percentage of patients who leave the hospital and survive at least 30 days after surgery) and complications (percentage of patients who avoid the most serious complications, which are the same as for bypass).

All data were adjusted based on the health of patients. Still, limitations of such adjustments can make direct comparisons difficult.

**MORE INFORMATION** For details on our methodology, go to [www.ConsumerReports.org/cro/howweratehospitals](http://www.ConsumerReports.org/cro/howweratehospitals). For our complete hospital Ratings, subscribers to our website can go to [www.ConsumerReports.org/hospitalratings](http://www.ConsumerReports.org/hospitalratings).
